

## Sophos Secure Workspace

### Extend your encryption to your mobile devices

Most organizations today have some level of encryption protection in the workplace. But what about all those files and documents sent via email, shared within groups, synced to the PC at home, and to your mobile phone? The corporate perimeter no longer ends at the office door. While you cannot control where the data goes, you can still ensure it remains protected. Sophos Secure Workspace is a containerized mobile content management app for iOS and Android. It provides a secure way to protect, manage, and distribute business documents.

#### Highlights

- ▶ Decrypt and encrypt files with AES-256, a technology even the military uses
- ▶ Create access control restrictions based on time, Wi-Fi, or geo-location
- ▶ Disabling access on compromised devices secures access to protected data
- ▶ Access files from leading cloud storage providers, including any WebDAV service
- ▶ Get files from a defined company document store
- ▶ Manage the keys required to lock and unlock the files, or retrieve keys from a Sophos Safeguard encryption server
- ▶ Encrypt new files on your mobile device
- ▶ View HTML, images and videos
- ▶ View and edit text and PDF documents
- ▶ For additional security, protect app access with a passcode

#### No limits to collaboration

With Sophos Secure Workspace and Sophos SafeGuard documents can move freely and securely from Windows to Mac to Android and Apple iOS devices. And, you can be assured your data is protected and encrypted all the way, mitigating the risk of data loss. Users can view and edit data immediately, then save and share as the data is automatically encrypted again. The workflow is seamless, the process invisible. This is security made simple.

#### Protecting data in the cloud

All data stored in the cloud should be safe; however, it is dependant upon offering differing security and access policies and the users discipline. The only truly safe method is to encrypt data before it even reaches the cloud. Encrypted documents can then only be opened with the right keys, and each key is protected with a passphrase. Such encrypted documents cannot be opened by anybody else.

#### Comprehensive security

Sophos is the only security provider to provide a data security solution that covers all data protection situations. Secure your device with advanced anti-malware and antivirus protection, security and privacy advisors, and a management console that allows you to define and execute your security policies. You also gain the ability to detect a compromised device and automatically lock it.

## Manage with Sophos Mobile Control

Sophos Mobile Control is our Enterprise Mobility Management (EMM) solution for businesses that want to spend less time and effort managing and securing mobile devices. Benefits of managing Sophos Secure Workspace with Sophos Mobile Control:

- Enable and enforce an app password
- Auto-lock the app after a certain time off line
- Remotely lock the app in case of a security breach
- Push corporate documents directly to all mobile devices
- Define comprehensive security policy and compliance rules including network, endpoints, and mobile devices
- Containerized Corporate Browser gives admins control of which sites the users can access, transparently to the user

## Supported platforms

- Android 4.0.3 or higher (tables and smartphones)
- Apple iOS 7 or higher

## Products

Sophos Secure Workspace is part of Sophos Mobile Control, Sophos SafeGuard Enterprise, and selected Sophos endpoint protection products. See [sophos.com](http://sophos.com) for more information.

Benefits for users			
CEO/CFO	Assures organization's data is protected	Fully embrace new collaborative technologies	Budget-friendly and sustainable user licensing
IT Manager	Solid reliability and excellent support	Easy to deploy	Low total cost of ownership
Security Officer	Allows for a comprehensive security policy that goes beyond the network and reaches into the cloud and to all mobile devices		
End user	Intuitive, easy-to-use encryption and seamless decryption
